**Desert Screen** Paul Virilio 2005-06-30 Desert Screen is a vision of future war. Paul Virilio identifies the Gulf War as a turning point in history, the last industrial and the first information war. Virilio argues that we live in a world still exhausted from the geopolitics of the Cold War, a world in which the politics of military and media technology seem to preclude the possibility of negotiation and diplomacy. This new translation of an already classic text includes a new interview with Virilio in which he looks back at a decade of war at the speed of light.

**Deterministic Operations Research** David J. Rader 2013-06-07 Uniquely blends mathematical theory and algorithm design for understanding and modeling real-world problems Optimization modeling and algorithms are key components to problem-solving across various fields of research, from operations research and mathematics to computer science and engineering. Addressing the importance of the algorithm design process. Deterministic Operations Research focuses on the design of solution methods for both continuous and discrete linear optimization problems. The result is a clear-cut resource for understanding three cornerstones of deterministic operations research: modeling real-world problems as linear optimization problem; designing the necessary algorithms to solve these problems; and using mathematical theory to justify algorithmic development. Treating real-world examples as mathematical problems, the author begins with an introduction to operations research and optimization modeling that includes applications from sports scheduling to the airline industry. Subsequent chapters discuss algorithm design for continuous linear optimization problems, covering topics such as convexity. Farkas' Lemma, and the study of polyhedral before culminating in a discussion of the Simplex Method. The book also addresses linear programming duality theory and its use in algorithm design as well as the Dual Simplex Method, Dantzig-Wolfe decomposition, and a primal-dual interior point algorithm. The final chapters present network optimization and integer programming problems, highlighting various specialized topics including label-correcting algorithms for the shortest path problem, preprocessing and probing in integer programming, lifting of valid inequalities, and branch and cut algorithms. Concepts and approaches are introduced by outlining examples that demonstrate and motivate theoretical concepts. The accessible presentation of advanced ideas makes core aspects easy to understand and encourages readers to understand how to think about the problem, not just what to think. Relevant historical summaries can be found throughout the book, and each chapter is designed as the continuation of the "story" of how to both model and solve optimization problems by using the specific problems-linear and integer programs-as guides. The book's various examples are accompanied by the appropriate models and calculations, and a related Web site features these models along with Maple™ and MATLAB® content for the discussed calculations. Thoroughly class-tested to ensure a straightforward, hands-on approach, Deterministic Operations Research is an excellent book for operations research of linear optimization courses at the upper-undergraduate and graduate levels. It also serves as an insightful reference for individuals working in the fields of mathematics, engineering, computer science, and operations research who use and design algorithms to solve problems in their everyday work.

Reserved, honourable Mr Malik. You wouldn't notice him in a Nairobi street - except, perhaps, to comment on his carefully sculpted comb-over - but beneath his unprepossessing exterior lie a warm heart and a secret passion. Not even his closest friends know it, but Mr Malik is head-over-heels in love with the leader of the local Tuesday-morning bird walk, Rose Mbikwa. Little can he imagine the hurdles that lie before him. Even as he plucks up the courage to ask for Rose's hand, thieves, potential kidnappers and corrupt officials, not to mention one particularly determined love rival, seem destined to thwart Mr Malik's chances. Will an Indian gentleman in the heart of Africa be defeated by the many obstacles that stand between him and his heart's desire? Or will honour and decency prevail?
